

Parading through a future circular neighbourhood. An online arts and sciences festival

Judith SCHUELER

Ellen LOOTS

Amanda BRANDELLERO

Online workshop

March 28th, from 4:00 to 6:30 pm CET

Place-based images on Dutch circular area development will spiral around in an online science-and-art 'parade' that is worth sharing with an international audience. In 2030 the Dutch economy is 50% circular, 100% in 2050. Making a transition requires brainpower just as much as it involves all our senses: we need new images, new vocabularies, new sounds to move towards a truly sustainable future. Circular area development of existing business parks contributes to the transition – yet we need to build knowledge and expertise from scratch. What is circular area development? Who is involved in the decision-making? What are the best practices and failures? How to solve the tensions between housing and industry?

To speed up the knowledge sharing process, we invited action-researchers, proactive policymakers, daring entrepreneurs, and engaged artists to share their ideas, experiences, images, sounds to co-create sustainable futures for The Netherlands. Now, we are welcoming an international audience to this online arts and sciences festival in order to mix more brainpower and new senses to accelerate the transition to a circular Europe.

This event is brought to you by a collaboration of ACCEZ, the circular economy accelerator for Zuid-Holland and its partners at the Rotterdam Arts and Science Lab (involving Rotterdam's higher education institutions: Erasmus University, Codarts, and the Willem de Koning Akademie).
